Document date	15/06/2026
Review due	15/06/2027 (or sooner if the operation changes)

General notes on the venue

No Dice is a venue with a bar, kitchen, indoor golf course, pool tables and various coin-operated entertainment machines. This risk assessment covers the **bar function** of the venue. Separate risk assessments exist for the golf course and kitchen.

Risk assessment method

Severity (S) — judged by evaluating the effects of the hazard if the risk occurs: Minor = 1, Major = 2, Serious = 3.

Likelihood (L) — the likelihood of the harm occurring: Unlikely = 1, Possible = 2, Likely = 3.

Overall risk — Severity (S) × Likelihood (L): **1–3 Low, 4–6 Medium, 7–9 High**.

S × L	Unlikely (1)	Possible (2)	Likely (3)
Minor (1)	1 Low	2 Low	3 Low
Major (2)	2 Low	4 Medium	6 Medium
Serious (3)	3 Low	6 Medium	9 High

HAZARD	WHO IS AT RISK	WHAT ACTION IS TAKEN NOW	RATE OF RISK	WHAT FURTHER ACTION CAN BE TAKEN
--------	----------------	--------------------------	--------------	----------------------------------

Injury through slips, trips and falls	Staff and customers	- Any and all spillages are immediately cleaned, and staff ensure that the floor is dry. - Bar equipment is maintained to ensure no leaks. - The floors are cleaned early in the morning, outside normal operating hours, by a specialist company who know about proper use of products and how to avoid residue. - Appropriate lighting installed in all areas. - Access to the store room is restricted to staff, via a keypad lock system, and is never left open. - Stairways are not to be obstructed; staff check regularly. - Cable covers used for electrical cables. - Staff are instructed to wear appropriate footwear.	S = 1 · L = 2 S × L = 2 Low	If any particular hazards are noted — or a slip, trip or fall does occur — additional signage may be required. Any damage to floor covering must be noted and resolved immediately.
Falls from height	Staff	- If a ladder is required, it must only be used for light work of short duration by trained staff. Ladders must be suitable and regularly inspected for defects. - All significant work at height is performed by contractors with specific training and expertise. - Ladders must be used by 2 people — with 1 person holding the ladder. - All ladders must be checked before use.	S = 3 · L = 1 S × L = 3 Low	Local A&E details kept on site in case a fall from height does occur.

Violence	Staff and customers	• All staff are instructed to adhere to the legal requirement not to sell alcohol to customers who are intoxicated. • Trained security personnel are on site during all operating hours. Their primary role is the entrance, but they are instructed to pay attention to any disturbances inside, and are introduced to all staff so staff may seek assistance. • Team members are instructed not to allow access to individuals who are intoxicated. All refusals are recorded in the incident logbook. • CCTV is installed covering all areas of the venue; footage is recorded and stored for 30 days. Venue management can view CCTV remotely. • Staff are trained to be polite to customers, but to know when to summon assistance from security staff or contact police if necessary. • Staff are made aware of customers who are barred or not welcome. • Glasses are regularly collected. • Gaming machines take tokens, not money. • The bar takes card payments only, and no money is kept on site.	S = 2 · L = 2 S × L = 4 Medium	Management to arrange liaison with local police. Any and all incidents promptly investigated. Consider installation of a panic alarm if issues become a regular occurrence.
Manual handling injuries	Staff	• Staff employ good practice when lifting heavy items, and are instructed not to attempt to lift or move items beyond their abilities. • Staff are instructed to move only one crate at a time. • Staff trained in moving kegs. • Staff are instructed never to move coin-operated equipment. • Staff are trained in lifting techniques and posture for items behind the bar.	S = 2 · L = 1 S × L = 2 Low	Purchase of sack trucks or trolleys.
CO₂ leakage	Staff	• Only trained staff are to change barrels. • Safe working practice, in line with BBPA guidance. • Keg room is well ventilated.	S = 3 · L = 1 S × L = 3 Low	Train further staff to change barrels.

Pressurised equipment	Staff	Pressurised systems: • Systems are designed, installed and maintained in line with the BBPA's Code of Practice 2006. An installation certificate is obtained. • Only trained staff use the system. • Cleaning containers are suitable for the system's maximum pressure and labelled to avoid confusion. • System is inspected by a competent engineer every five years, or to a schedule produced by the competent engineer. • Any damage reported immediately. Gas cylinders: • Only purchased from reputable suppliers. • Numbers kept to a minimum. • Moved and stored correctly to prevent damage. • Chained up away from heat sources, in a dry area with the valve closed. • Used in an upright position in a safe, secure and dry area.	S = 3 · L = 1 S × L = 3 Low	Train further members of staff on use of pressurised systems.
Noise	Staff and customers	• No music is played at excessive levels. • Volume of equipment turned to zero when connected to a source — once music is playing, the speakers are gradually turned up to an appropriate level.	S = 2 · L = 1 S × L = 2 Low	Reviewed for DJ sessions: sound levels are managed by the duty manager and kept within licensed limits; this assessment is revisited if the live-programming policy changes.
Electricity	Staff and customers	• Wiring checked every five years by a qualified electrician. • Annual PAT testing undertaken by a qualified electrician. • Staff trained to spot damaged equipment, plugs and cables, and to take them out of service if required. • All staff aware of the location of the fuse box — in a cupboard behind the bar, immediately accessible in an emergency.	S = 3 · L = 1 S × L = 3 Low	Ensure staff induction includes how to turn off the electricity.

Hazardous substances	Staff	• All general venue cleaning undertaken by specialist contractors. • All products' safety data sheets checked to see what protection or measures are necessary for use with the chemicals. • Staff informed re skin care when washing glasses and handling dishwasher chemicals. • Chemicals always stored in original labelled containers. Any containers for decanted chemicals are clearly marked. • Line cleaning only undertaken by specifically trained staff. Access to the cellar is restricted during this activity.	S = 3 · L = 1 S × L = 3 Low	None.
Fire	Staff and customers	• No smoking allowed inside the venue. • Fire risk assessment arranged; see also the No Dice Fire and Emergency Evacuation Plan. • Staff check that fire exits are clear.	S = 3 · L = 1 S × L = 3 Low	None.
