

No Dice — Kitchen Operations Risk Assessment

Site: No Dice, Arch 407, Mentmore Terrace, London Fields, London E8 3PH — kitchen trailer & wash-up room

Operating company	No Dice Hackney Ltd
Written by	Elliot Scott
Document date	15/06/2026
Review due	15/06/2027 (or sooner if the menu, equipment or operation changes)

General notes on the kitchen operation

Food is prepared and cooked to order from a **kitchen trailer** at the venue, supported by an interior **wash-up room** (double sinks and glasswasher). Equipment: flat-top griddle (plancha), twin-basket fryer, salamander grill, oven, Buffalo grill and microwave, two under-counter fridges and a freezer, and a dedicated hand-wash sink fed by a fresh-water tank with a separate waste tank. The menu is a short cooked-to-order offer — beef-patty burgers, halloumi burger, mortadella roll, spring rolls and fries — with **no hot-holding**. In-house prep is limited to caramelised onions and sliced tomato, batch-prepared, labelled and dated. Daily food-safety management follows the FSA's **Safer Food, Better Business** approach, run as digital opening / service / closing / weekly checklists with recorded temperatures and manager sign-off. This risk assessment covers the kitchen function of the venue; separate risk assessments exist for the bar and golf course.

Risk assessment method

Severity (S) — judged by evaluating the effects of the hazard if the risk occurs: Minor = 1, Major = 2, Serious = 3.

Likelihood (L) — the likelihood of the harm occurring: Unlikely = 1, Possible = 2, Likely = 3.

Overall risk — Severity (S) × Likelihood (L): **1–3 Low, 4–6 Medium, 7–9 High**.

S × L	Unlikely (1)	Possible (2)	Likely (3)
Minor (1)	1 Low	2 Low	3 Low
Major (2)	2 Low	4 Medium	6 Medium
Serious (3)	3 Low	6 Medium	9 High

HAZARD	WHO IS AT RISK	WHAT ACTION IS TAKEN NOW	RATE OF RISK	WHAT FURTHER ACTION CAN BE TAKEN
--------	----------------	--------------------------	--------------	----------------------------------

Food poisoning — cross-contamination and undercooking	Customers	- Raw meat is stored below ready-to-eat food in the fridge — checked at every opening. - Colour-coded boards: red = raw meat, yellow = cooked meat, green = salad/veg; boards and tongs sanitised between raw meat and ready-to-eat food. - Hands washed after handling raw meat and before buns/salad — a critical service check. - Cook temperatures probed and recorded: beef patties core $\geq 75^{\circ}\text{C}$; mortadella reheated piping hot $\geq 75^{\circ}\text{C}$; spring rolls and chips cooked through. - Fridges held at $\leq 8^{\circ}\text{C}$ and freezer at -18°C — temperatures recorded at opening and closing; a failed reading requires a corrective-action note before the checklist can be submitted. - Probe thermometer sanitised with probe wipes; accuracy verified weekly in iced water ($\approx 0^{\circ}\text{C}$). - Use-by dates checked daily; anything out of date is binned. Batch-prepped items (caramelised onions) cooled quickly, labelled, dated and stored $\leq 5^{\circ}\text{C}$. - Cook to order only — no hot-holding on the menu.	$S = 3 \cdot L = 1$ $S \times L = 3$ Low	Maintain the digital SFBB checklist records as the due-diligence log; review temperature records weekly at manager sign-off.
Allergens	Customers	- A full allergen matrix is maintained covering the 14 FSA allergens (plus mushroom, tracked in addition) for every dish and sauce, built from supplier label reads. - Known cross-contact is declared: the shared fryer means chips are not allergen-free and every "& chips" dish inherits fryer cross-contact. - Allergy orders follow a set procedure: matrix checked, clean utensils used, customer informed — a service checklist item. - The matrix is reviewed weekly against current stock and suppliers, and re-checked whenever a product or supplier changes. - Staff are instructed to direct any allergen question they cannot answer to the manager rather than guess.	$S = 3 \cdot L = 1$ $S \times L = 3$ Low	Complete any outstanding supplier label confirmations; keep the printed customer-facing allergen grid current with the matrix.
Staff illness contaminating food	Customers	- Fitness-to-work check at every opening: no food handling within 48 hours of diarrhoea or vomiting — a critical checklist item. - Clean apron and hands, hair tied back, no jewellery; cuts covered with a blue plaster. - Dedicated hand-wash sink stocked with soap and blue roll, checked hourly during service.	$S = 3 \cdot L = 1$ $S \times L = 3$ Low	Include the 48-hour rule in staff induction and rota communications.

Burns and scalds — fryer, plancha, salamander	Staff	- Only kitchen-trained staff operate the fryer, plancha, salamander, grill and oven. - Fryer oil is topped up and checked at opening; oil changes are done weekly with the fryer cool, filtered through a funnel into sealed 10 L jerry cans. - Equipment is switched off at closing per checklist (fryer off with oil covered; plancha, oven, grill and microwave off/unplugged). - Dry cloths/gloves used for hot handles; the cooking area is a staff-only zone. - First-aid kit present in the trailer — checked at every opening; burns kit contents included.	S = 2 · L = 2 S × L = 4 Medium	Refresher training on fryer oil handling; keep a burns-specific first-aid poster in the trailer.
Fire — cooking equipment and hot oil	Staff and customers	- Fire extinguisher present at the trailer, checked at every opening; fire blanket kept within reach of the fryer. - Fryer never left unattended while on; walls in front of the plancha and fryer degreased at every close to prevent grease build-up. - Salamander and extraction fan plus filters descaled/cleaned weekly to prevent grease-fire risk. - All equipment off at close per checklist; nothing combustible stored against hot equipment. - Any gas appliances are serviced and certified annually by a Gas Safe registered engineer. - Site-wide procedures are covered in the No Dice Fire and Emergency Evacuation Plan.	S = 3 · L = 1 S × L = 3 Low	Include the fryer in fire-drill briefings; never use water on an oil fire — covered in induction.
Cuts — knives and equipment	Staff	- Knives kept sharp and stored safely; never left in sinks. - Cuts covered with blue plasters (opening check); first-aid kit on site. - Prep is limited (onions, tomato), reducing knife exposure.	S = 2 · L = 1 S × L = 2 Low	Basic knife-skills point in kitchen induction.
Slips, trips and falls — grease, water, trailer step	Staff and customers	- Floors swept and mopped at every close (trailer and wash-up room); spillages cleaned immediately. - Surfaces and floor areas degreased daily; the concrete apron around the trailer cleaned weekly. - The wooden step outside the trailer is swept and mopped at close; nothing is left on the floor overnight. - Waste-water is emptied away from customer areas. - Staff wear appropriate closed footwear.	S = 1 · L = 2 S × L = 2 Low	Anti-slip tread on the trailer step; wet-floor sign for the wash-up room.

Hazardous substances — cleaning chemicals (COSHH)	Staff	• Safety data sheets checked for all chemicals in use; protection measures followed. • Chemicals stored in original labelled containers; decanted containers clearly marked. • Degreaser and sanitiser used per label; skin-care guidance given for glasswashing and dishwasher chemicals. • Chemicals restocked and checked weekly; stored away from food.	$S = 3 \cdot L = 1$ $S \times L = 3$ Low	None.
Manual handling — stock, oil, water tanks	Staff	• Staff trained in lifting technique; instructed not to lift beyond their abilities. • Used fryer oil handled in 10 L jerry cans (not larger); water tanks emptied/filled in place where possible. • Deliveries broken down into manageable loads.	$S = 2 \cdot L = 1$ $S \times L = 2$ Low	Trolley for stock runs between store and trailer.
Pests	Customers	• Weekly documented pest check (droppings/signs) as part of the deep-clean checklist. • Bins sealed at close (blue bag tied in) and emptied when full; behind-bin areas cleaned daily and deep-cleaned weekly. • Food stored off the floor, wrapped, labelled and dated; nothing left out overnight.	$S = 2 \cdot L = 1$ $S \times L = 2$ Low	Contract pest-control visits if any signs are found.
Water supply — tanks and waste water	Staff and customers	• Fresh-water tank filled at opening from a potable supply; waste tank emptied and cleaned. • Both tanks emptied, cleaned and sanitised weekly. • Water turned off at the mains as the final closing job — a critical checklist item.	$S = 2 \cdot L = 1$ $S \times L = 2$ Low	None.
Electricity	Staff and customers	• Annual PAT testing of trailer appliances by a qualified electrician. • Staff trained to spot damaged plugs, cables and equipment and take them out of service. • Grill and microwave unplugged at close; equipment kept away from water sources.	$S = 3 \cdot L = 1$ $S \times L = 3$ Low	Ensure kitchen induction covers isolating trailer power.
